Notes

- The graph shows the "measure" (e.g. crude rate, percentage, years of life) expressed as a percentage below or above the Scottish measure, but using a range from a minimum of -70% to a maximum of +70% only. The actual plus/minus percentage value is shown in bold to the right of the graph. This is calculated as the area 'measure' minus the Scottish measure, divided by Scottish measure and multiplied by 100.
- Average annual numbers and rates.
- Social Grade AB: higher & intermediate managerial/administrative/professional occupations; Social Grade E: on state benefit, unemployed, lowest grade workers
- Employee numbers based on location of business, not residence area of employees.
- Defined daily doses. See detailed table of definitions/sources (available at www.healthscotland.com/communityprofiles) for further details.

Key

cr - crude rate per 100 population; cr2 - crude rate per 100,000 population; cr3 - crude rate per 1,000 live births; cr4 - crude rate per 1,000 resident population; sr - age-standardised rate per 100,000 population; yrs - years; Defn - definition (see table of all data definitions and sources).

** Data presented at **community** (not postcode sector) level only.

n/a: not available - data may not be available for a number of reasons e.g. lack of complete national coverage, small population, or issues relating to wrongly used postcodes. In addition, where the number of cases for a particular indicator is '<5', most crude rates or percentages will be marked 'n/a' for reasons of confidentiality.

! This indicates a warning that although the standardised rate is shown, it is based on very small numbers should therefore be interpreted with caution.
